TervAlloy™ 1132 | FW+

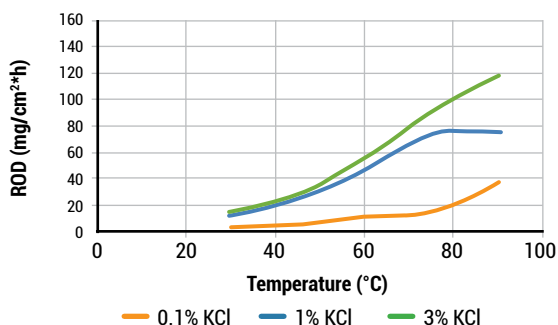

PRODUCT DESCRIPTION: DISSOLVABLE ALLOY

TervAlloy™ 1132 (FW+) is the latest freshwater version of Terves' patented dissolvable magnesium designed for oil and gas applications. This alloy presents the best of both worlds – dissolution at extremely low salinity levels (1000 ppm) with mechanical characteristics comparable to our market-leading TervAlloy™ 3241 (TAx100E).

TervAlloy 1132 is designed to provide our customers with the ideal product in applications where little salt content exists or where a very fast dissolving product is needed. TervAlloy 1132 provides mechanical performance previously unseen in any dissolvable alloy capable of responding to minimal salinity.

TervAlloy 1132 can be purchased in the same broad range of shapes offered across the TervAlloy range (including cost-saving tubulars) in lengths up to 48 inches (in increments of 6 inches), and also in frac ball configurations up to 4.95 inches in diameter.

- 1 Based on the standard solution of KCl the TervAlloy dissolves in ranked from **0 to 3** (3 requires the highest salinity)
0: 0.01% KCl
1: 0.1% KCl
2: 1.0% KCl
3: 3.0% KCl
- 2 Based on the rate of dissolution in the determined solution (see first number as noted above) at 60°C, ranked from **0 to 5** (5 being the highest/fastest)
0: 0-9 mg/cm²hr
1: 10-19 mg/cm²hr
2: 20-29 mg/cm²hr
3: 30-39 mg/cm²hr
4: 40-49 mg/cm²hr
5: 50-59 mg/cm²hr
- 3 Based on the average ultimate tensile strength (UTS) ranked from **0 to 6** (6 being the highest) (**3**)
- 4 Based on the elongation, ranked from **0 to 4** (4 being the highest rate of average elongation) (**2**)
